

Conf-ID-ent™ Blood Bands

Does your Blood Band meet your current needs?

- Q. Does your blood band require you to manually handwrite patient information several times, leaving room for legibility and transposition errors?**
- A. *Conf-ID-ent™ blood bands require the phlebotomist to enter the patient information only one time, thus reducing the chance for errors.*
- Q. Is your blood band available in colors other than red, yellow and green so it does not interfere with your state color-code alert standardization efforts?**
- A. *Conf-ID-ent™ blood bands are available in light blue and orange, which will not interfere with state color-code alert standardization efforts.*
- Q. Does your blood band specimen label fit your draw tube properly without dangling over the edge?**
- A. *Conf-ID-ent™ blood band specimen labels are designed to properly fit the draw tube, without dangling over the edge or overlapping the primary label on the draw tube.*
- Q. Do your specimen identification labels adhere directly to the draw tube, ensuring the labels remain with the patient's sample?**
- A. *Conf-ID-ent™ blood bands have an adhesive peel-off tail which allows the specimen identification labels to adhere directly to the draw tube, ensuring the unique identifier stays with the patient's specimen.*
- Q. Does your blood band comply with Joint Commission's National Patient Safety Goals "Use at least two identifiers when administering medications, blood, or blood components; when collecting blood samples and other specimens for clinical testing?"**
- A. *Conf-ID-ent™ blood bands comply with the Joint Commission National Patient Safety Goals by providing two unique identifiers such as patient's name, medical record and date of birth (DOB) prompt, along with the bands unique serialized identifier.*
- Q. Is your blood band resistant to fluid penetration?**
- A. *Conf-ID-ent™ blood bands are resistant when exposed to fluids. Patient information does not smudge when the wristband comes in contact with fluids.*
- Q. Is your blood band latex and phthalate-free?**
- A. *All St. John Conf-ID-ent™ products are latex and phthalate-free. Safe for the patient, the caregiver and the environment.*
- Q. Is your blood band cost effective?**
- A. *Compare what you are currently using and see for yourself. St. John Conf-ID-ent™ blood bands offer significant savings. Switch to Conf-ID-ent™ blood bands and start saving money today!*
